About

Zomato is a prominent Indian digital platform specializing in food delivery, restaurant discovery, and dining services. Established in 2008, the company has expanded its operations to over 800 cities across India. Beyond its core offerings, Zomato provides services such as table reservations, event bookings, and cloud kitchen solutions. In 2022, Zomato acquired Blinkit, a leading quick-commerce company, to diversify its services and tap into the growing demand for rapid grocery deliveries.

Business Model

Zomato functions as a digital ecosystem for the food industry, acting as a bridge between consumers and restaurants. It not only provides online food ordering and delivery but also enables restaurant discovery, table bookings, and reviews. By leveraging technology, Zomato helps restaurants manage orders, reach new customers, and optimize operations, creating a comprehensive platform for both dining and delivery experiences.

Revenue Streams

- Commissions from Restaurants on every order placed through Zomato.
- Delivery Fees on food delivery.
- Subscription Fees for Zomato GOLD memberships.
- Advertising & Promotions for Restaurants to appear prominently on the platform.
- Advertisement and listing fees for live events
- Service fee on each ticket sold for live events

Problem Statement

Zomato has achieved strong market penetration with food delivery, dining, and Blinkit integration, but user engagement and retention remain key challenges in a highly competitive landscape. As the **Product Head**, your objective is to design and prioritize new product features that will enhance user experience, engagement and loyalty.

Benefits of Solving the Problem

- **Increased Revenue and Profitability:** Expanding user engagement and order frequency leads to higher revenue through commissions, delivery charges, and subscriptions
- **Enhanced User Engagement and Loyalty:** Offering more convenience strengthens customer relationships and makes users less likely to switch to competitors
- **Future Growth and Diversification:** Engaged and loyal users open opportunities for expansion into new verticals and premium services. This future-proofing strengthens Zomato's competitive edge

**Raj Vardhan | 22 | Student | Bhubaneswar | Standard User****Pain Points**

- Finds it hard to split bills fairly when ordering with friends.
- Feels discounts and rewards are not motivating enough to use the app daily.

Needs

- A simple way to split group bills within the app.
- More engaging rewards that make daily use worthwhile.

**Rahul Sharma | 32 | Operations Manager | Bangalore | Regular User****Pain Points**

- Orders frequently but feels the app doesn't reward him for loyalty.
- Finds it difficult to maintain a balance between convenience and healthy options.

Needs

- A loyalty system that recognizes and rewards consistent usage.
- Better guidance on healthier meal choices.

**Neha Arora | 43 | Housewife | Jaipur | Family User****Pain Points**

- Ordering for a family often requires juggling between multiple apps (food + groceries).
- Difficult to find family-friendly or nutritious options in one place.

Needs

- A seamless way to order food and groceries together.
- Clear visibility into healthy, family-oriented meal options.

Gamified Rewards & Streaks

Introduce daily streaks, badges, and challenges to make ordering fun and habit-forming. For example: “Order 3 times this week to unlock a badge” or “Try 5 new cuisines this month.” By rewarding small milestones, Zomato can encourage consistent usage without heavy discounts.

Benefits

- Builds daily active user habits, boosting engagement.
- Creates brand stickiness by offering intrinsic motivation for fun and status.
- Improves retention without relying solely on promotions.
- Unlocks upsell opportunities through rewards and milestone achievements.

Split Bill in Group Orders

Enhance group ordering by allowing users to split payments directly in-app. Each friend pays for their portion through the app rather than one person paying the full amount. Simplifies group ordering, making it more attractive for students, friends, and families

Benefits

- Drives adoption of group ordering.
- Encourages larger basket sizes since payments are fairly shared.
- Strengthens social engagement with the app.
- Reduces payment friction by allowing instant, transparent cost-sharing within the checkout flow.

Unified Cart with Blinkit

Allow users to add both food (restaurants) and groceries (Blinkit) in one cart and complete a single checkout. A unified payment and tracking flow will simplify the experience for users. Smart slot optimization can ensure timely fulfillment while reducing friction in managing multiple orders.

Benefits

- Increases revenue per transaction through bundled orders.
- Strengthens Zomato–Blinkit ecosystem integration.
- Makes Zomato an “everyday essentials” app, not just food delivery.
- Boosts user retention by creating habitual cross-category usage.

Nutrition & Health Tracking

Offer calorie and nutrition details for meals, with an option to sync with health apps (Apple Health, Fitbit). Users can set dietary goals and track progress within the Zomato app. Appeals to health-conscious users who want transparency about what they eat. Positions Zomato as a lifestyle partner, not just a delivery app.

Benefits

- Builds differentiation in a competitive market.
- Attracts premium, urban, and health-focused segments.
- Enhances trust with transparency around food choices.
- Enables personalized nutrition insights and healthier meal planning.

MR. RICE FRAMEWORK

MR. RICE = Reach x Impact x Confidence / Effort x Risk x Money

RECOMENDATION	REACH	IMPACT	CONFIDENCE	EFFORT	RISK	MONEY	SCORE
Gamified Rewards and Streaks	5	4	5	2	2	2	2.5
Split Bill in Group Orders	4	4	4	2	2	2	2
Unified Cart with Blinkit	5	5	4	3	2	3	1.67
Nutrition and Health Tracking	3	4	3	4	3	3	1.2

Gamified Rewards & Streaks

(Score = 2.5)

- Reach & Impact: Applies to the entire user base and strongly drives engagement.
- Confidence: High, as gamification has proven effective in similar apps.
- Effort, Risk & Money: Low implementation cost and risk make this a quick win..

Split Bill in Group Orders

(Score = 2.0)

- Reach & Impact: Appeals strongly to students, families, and social groups with larger orders.
- Confidence: Reliable feature extension of existing group ordering.
- Effort, Risk & Money: Simple to implement with minimal financial or operational risk.

Unified Cart with Blinkit

(Score = 1.67)

- Reach & Impact: High, as it touches both Zomato and Blinkit users, boosting order value.
- Confidence: Strong, backed by demand for bundled services.
- Effort, Risk & Money: Moderate investment and operational complexity, but scalable benefits.

Nutrition & Health Tracking

(Score = 1.2)

- Reach & Impact: Limited to health-conscious users, but builds strong differentiation.
- Confidence: Moderate, given data reliability concerns.
- Effort, Risk & Money: High effort and cost suggest it should be phased in later.

Phase 1: Drive Engagement & Quick Wins

Focus on launching Gamified Rewards & Split Bill as low-effort, high-impact features. Gamification will boost daily active users by making food ordering fun and habit-forming. Split Bill simplifies group orders, driving adoption among students and young professionals. Marketing will rely on in-app campaigns, referral boosts, and social sharing of streaks and group payments.

Phase 2: Build Ecosystem Stickiness

Roll out the Unified Cart with Blinkit to integrate food and grocery into one seamless experience.

This drives higher average order values and reduces the need for users to switch between apps.

Cross-promotion between Zomato and Blinkit will highlight convenience and cost savings.

In-app tutorials and limited-time bundled offers will encourage trial and repeat usage.

Phase 3: Differentiate & Expand Market Positioning

Introduce Nutrition & Health Tracking to strengthen Zomato's brand as a lifestyle and wellness partner. This phase targets health-conscious, premium users in Tier-1 cities. Campaigns with fitness influencers, dieticians, and lifestyle bloggers will drive awareness.

The feature enhances trust, transparency, and long-term loyalty by aligning with healthier living.

THANK YOU
